

Southern Visayas, Philippines

6 nights Itinerary

Cebu to Moalboal

- **Meeting point for embarkation:** Marina Seaview Restaurant, Mactan Island
- **Cebu embarkation:** 13:00
- **Disembarkation:** Moalboal Pier at 10:00*

Moalboal to Cebu

- **Embarkation location:** Moalboal Pier*
- **Moalboal embarkation:** 13:00
- **Disembarkation:** Marina Seaview Restaurant at 10:00

**Transfers to or from Moalboal for embarkation or disembarkation are not included in the liveaboard price but are offered as a shared transfer for an additional charge.*

Please refer to the [Visayas Cebu / Moalboal Trip information](#) for specific transfer details.

Marine Park & Port Fees: 75 USD per person* (payable onboard only)

PLEASE NOTE: *Marine park fees are subject to change without notice.* The applicable amount at the time of departure will be added to your onboard extras to be paid before disembarkation.

*There is an additional charge of 30 USD per person, also payable on board, for diving with whale sharks at Oslob should you choose to do so.

Minimum dive certification and experience:

Diving conditions in and around the Visayas are generally suitable for all levels of divers although some sites can be challenging for inexperienced divers due to currents.

Divers wishing to join this itinerary are advised to have Advanced Open Water certification*, or equivalent, with a minimum of 10 logged dives and experience in strong currents.

*PADI Advanced Open Water certification can usually be completed on board if requested and confirmed in advance.

Guests who do not fulfil the minimum certification and experience requirements may be denied participation in some or all dives.

It is a mandatory requirement for all divers to have insurance which covers scuba diving activities, including emergency evacuation and recompression chamber costs.

Itinerary Details

Participation in this liveboard itinerary is subject to acceptance of our Terms & Conditions as outlined here: www.masterliveboards.com/terms-conditions.

Number of scheduled dives: Up to 18

This itinerary involves some long-distance travel between sites and, whilst we attempt to ensure the number of planned dives is fulfilled, bad weather and sea conditions can affect the boat's ability to reach a specific dive site in good time and may impact the number of dives that are possible.

Safety and dive briefings are conducted in English. If you, or any of your group, do not speak or understand English, please contact us.

The following is an example of the day-to-day itinerary.

Day 1: Embarkation at 13:00 followed by lunch and briefings. If time allows there may be a check dive scheduled but *diving on embarkation day is not guaranteed*.

Day 2-4: Your Cruise Director will schedule up to 4 dives per day; 3 day dives and a sunset or night dive. A typical diving day is scheduled as follows:

- Light Breakfast followed by a briefing & Dive 1
- Full Breakfast, relaxation followed by briefing & Dive 2
- Lunch, relaxation followed by briefing & Dive 3
- Snack
- Briefing for Dive
- Dinner

Day 5: Usually 2 morning* dives before Philippine Siren commences the cruise to port.

Day 6: Following breakfast on board, disembarkation is between 09:30 am and 10:00 am.

*We kindly request that guests check their flight departure times to ensure that they leave a minimum of 24 hours between their final dive and the departure of their flight.

Following is a sample of the dive sites which we may visit during your time aboard Philippine Siren. Guests are welcome to suggest preferred dive sites to the Cruise Director who will be happy to accommodate guests' wishes where possible and the schedule allows for it.

The safety of our guests is paramount and we always do our best to offer diving at alternate locations, should we be unable to visit those sites listed below.

Moalboal, Cebu

The main attraction of Moalboal is the millions of sardines hanging out along the shoreline, and the turtle population that can be found at several locations. The dive sites and number of dives conducted around Moalboal depend on several factors, including the itinerary route but will usually be at least one of the following: Panagsama Beach, Tongo Point, Turtle Bay and Dolphin House.

Pescador Island

Just 30 minutes away from Moalboal, this small island is a perfect place to explore dramatic steep walls and lively, colourful reef-tops. Thousands of damselfish, anthias and chromis dart around the corals while schools of fusiliers, red-tooth triggerfish, surgeonfish, long-jawed mackerel, juvenile convict fish and big-eyed trevallies fill the blue. Pescador Island is also home to several giant frogfish. On the northwest side, a large cavern with sunlight filtering through the chimney from above provides an array of photo opportunities.

Dauin, Negros

Dauin, with its black volcanic sand, is famous for its muck diving and fabulous macro creatures. Depending on the season, different types and sizes of octopuses, sea horses, frogfish from minuscule babies to full-grown adults, a variety of ghost pipefish, and flamboyant cuttlefish can be found.

The Cars

Perhaps rather unimaginatively named, the main attraction of this dive site is the artificial reef created from the chassis of two cars that host an amazing amount of marine life. Surrounded by sand at a depth of 24-29 metres, you will usually find groups of snappers, angelfish, lionfish and sweetlips hanging around the wrecks which, if you take a closer look inside, have also created a perfect environment for an array of crustaceans. On the sandy slope that leads to the wrecks, the keen-eyed are likely to discover no end of macro delights including juvenile frogfish, robust, ornate and velvet ghost pipefish, sand divers, dragonets, flamboyant cuttlefish and much, much more.

Secret Corner

It's no secret that this sandy, rubble-strewn slope is potentially a cephalopod lover's nirvana. Blue-ringed, mimic and coconut octopus, wunderpus and flamboyant cuttlefish are just some of the species that can be found here. Other delights include snake and garden eels, waspfish, spiny devilfish, hairy frogfish and seahorses.

Ceres

This is another fantastic macro site featuring a sandy slope and artificial reef made up of tyres and concrete mooring blocks. Named after the local bus company that donated the tyres, marine life that can be found here includes stargazers, seahorses, a variety of frogfish species, flamboyant and pygmy cuttlefish and ambon scorpionfish.

Mainit

Currents at this location are often strong, so it is usually dived as a one-way drift. Featuring a mix of black volcanic sand with patches of hard and soft corals, fish life is prolific and varied. This lively and exhilarating dive ends in an area with yellow, sulphur-rich, hot sand, hence the name Mainit meaning 'hot' in Visayan.

San Miguel

A relatively shallow dive site with sandy slopes, seagrass beds and a small reef full of fish, San Miguel is another critter wonderland! This is the place to find all your favourites including a variety of nudibranchs, ghost pipefish, tiny juvenile frogfish and even the possibility of finding Pygmy Squid, mimic octopus, or newly hatched flamboyant cuttlefish.

Apo Island

Apo Island Marine Reserve is one of the most successful marine sanctuaries established in the Philippines. Reef hooks and gloves are not allowed and night diving is unfortunately not permitted. The order of dives will be based on the currents and conditions of the day choosing from:

Coconut Point

Situated on the northwestern tip of Apo Island, strong currents make for an exhilarating and sometimes challenging dive. Also referred to as 'The Washing Machine', this fast-paced drift takes divers over the sloping coral reef to a rock wall; a sandy channel between two cliffs provides an opportunity to take a breather and look out for passing pelagics. Along the way, large schools of trevallies, blackfin barracuda, snappers, sweetlips, potato groupers and plenty of sea snakes can be encountered.

Cogon

On the eastern side of Apo, this is another site that often experiences strong currents and therefore dived as a drift. Starting as a sandy slope that evolves into a coral reef leading to a steep wall, there is plenty of coral and marine life activity to catch your eye as you are carried along by the current. A large school of big-eyed trevally are commonly seen here as well as reef sharks, blue-spotted stingrays and turtles.

The Chapel

On the west side of the island, the reef starts as a gentle sandy slope with scatterings of coral bommies becoming progressively steeper as you get nearer to the wall section which drops off to more than 40 metres. The wall is dotted with small crevices and caverns adorned with soft and hard corals, sponges, sea fans and anemones hosting an abundance of small aquatic creatures. Electric clams, a wide variety of nudibranchs, eels and crustaceans are just some of the delights that await the inquisitive diver. Hawksbill and green turtles can also be found munching on the corals while large predatory fish pass by in the blue.

Rocky Point West

Just beyond the chapel opposite the marine park warden's office, Rocky Point West offers some of the most stunning hard corals to be found in the region with endless patches of leather corals on the top. The steep reef walls support numerous colourful reef species; pyramid butterflyfish and red-toothed triggerfish can usually be seen here in their hundreds. Frogfish, cuttlefish, banded sea snakes and hawksbill turtles are also common sightings.

Oslob (optional)

The optional whale shark encounter, where the whale sharks are hand-fed, can be done by diving or snorkelling, subject to additional fees payable at the destination. Please be advised **it is not allowed to use strobes and/or flashlights here.**

Balicasag Island

The small island of Balicasag, just off the tip of Panglao, is characterised by its many turtles, coral gardens and steep walls which provide overhangs, cracks & crevices in which to search for a variety of marine species. This area has been a marine protected area since July 2017 and allows two dives per day only with valid permits.

Divers Heaven

One of the big attractions of this aptly named, beautiful dive site is the hawksbill and green sea turtles that can often be seen here. The shallows comprise a sandy area covered with seagrass which the turtles come to graze on and also has plentiful coral formations, reef fish and macro species. The coral coverage becomes denser and more extensive as you progress further down the steeply sloping reef which reaches depths of 40+ metres and features many ledges and overhangs with lots of soft corals, gorgonians and sponges. Goldband fusiliers, Big-Mouth mackerel, Midnight snappers, Redtooth Triggerfish, Angelfish, Barracuda, Bluefin trevally and Bigeye trevally are just some of the fish that you are likely to see in large numbers along the reef. Leaf scorpionfish are another delight that can be found in this aquarium-like environment as well as numerous nudibranchs, eels and anemone fish.

Black Forest

Named for the proliferation of black corals that can be found at depths that extend beyond recreational limits, Black Forest is well known for its biodiversity and beauty.

Often dived as a drift, the reef forms a steep slope with a wide variety of corals and marine life. Damsel fish, anthias, chromis, scorpionfish, wrasses, turtles and more can be found going about their business in and around the corals; in the blue, schools of jacks, blue-dash fusiliers and barracuda are common sightings as well as Titan triggerfish and Napoleon Wrasse.

Cabilao Island

There are many interesting and colourful walls and coral gardens around the island of Cabilao; we usually choose from the following:

Gorgonian Wall

Starting at 5 metres and extending to a depth of 60 metres, this 100-metre-long wall is awash with giant gorgonians, corals and sponges. Also featuring many overhangs and small caves, fish activity is plentiful and hidden wonders are waiting for the eagle-eyed to find including pygmy seahorses, frogfish and rare nudibranch specimens.

Lighthouse

So named because the site is in front of the lighthouse on the northwest tip of Cabilao Island, this is a sloping wall covered with seagrass and corals which is often frequented by green turtles. Amongst the corals and sponges, you are also likely to find frogfish, cowrie snails, ghost pipefish, stargazers, Pegasus seamoths, various crustaceans, and electric file clams.

Talisay Tree

Along the northern shore of Cabilao, Talisay Tree is another gorgonian-covered wall with a shallow seagrass garden interspersed with elephant ear and barrel sponges. The site offers some fantastic wide-angle and macro photo opportunities with bubble corals playing host to their commensal shrimps and orangutan crabs.

Cambaquiz

Cambaquiz is a favourite location for a sunset or night dive. Comprising a gentle sandy slope dotted with clusters of soft corals, sea pens and seagrass there is an abundance of delights to be discovered here by torchlight. Stargazers lie camouflaged in the sand while an array of crabs and shrimps can be found hiding in the corals and grassy patches along with seahorses, pipefish and wunderpus to name just a few.

Should you have any questions concerning the dive sites or whether this itinerary is suitable for your experience level, please contact our reservations team dive@masterliveboards.com who will be pleased to assist and advise you.
